

PVC THERMAL BOOT

Padded lining
Insulating midsole
Anti-sweat insole

Art.90

YOUR FEET WILL ALWAYS FEEL DRY AND PROTECTED FROM THE COLD

THERMAL

ANTI-SWEAT

ANTIBACTERIAL

The insole is made of an innovative and technological nonwoven fabric multilayer

PVC BOOT

PADDED REMOVABLE INSOCK

ANTI-SWEAT INSOLE

MICROPOROUS INSULATING MIDSOLE

"M.A.S.T. ACTIVE" layer: transpiring and sanitising. Is made of a revolutionary "COOLMAX" fibre which passes the sweat of your body outside the fabric, thereby helping you dry quickly. ACTIVE contains the AMICOR fibre which, due to its antimycotic and antimicrobial properties, protects the material against the development of fungi and bad odours.

"M.A.S.T. DRY" layer: super absorbent. Is made of a revolutionary synthetic fibre that enables it to absorb and retain water exceeding 700% of its own weight. It is a nonwoven fabric containing silver fibre, which gives it permanent antibacterial and antistatic/conductive properties.

Latex foam layer: breathable and elastic material. It is subjected to an antibacterial treatment and thanks to its softness it makes you feel a great confort while using the product.

Microporous midsole: it is an additional insole made with a thick layer of a multifunction material: it is shock absorber, stabilizing and insulating.

Double sizes from 39/40 to 45/46

As a result your feet will always feel dry, thanks to the super absorbent technology that makes your feet feel dry and eliminates the unpleasant sensation of wet feet.

For proper use, remove the lining at the end of the day to let it air dry
